

CALIFORNIA CONSERVATION GENOMICS PROJECT

Dear CCGP Investigators,

When we last requested information on WGS progress, many groups were at various stages of sampling, library prepping, and sequencing, while other groups had plans to wrap up in winter/early spring. Given that, we would like to request another WGS snapshot to get a general update on how projects have progressed since then. Please complete our brief survey (4-5 questions) by 5pm PST February 28, 2022.

Please click [here](#) to complete the WGS survey

Important reminders regarding WGS data collection

If your WGS data has already been generated or will be generated outside of the CCGP Mini-Core, it is your responsibility to share raw resequencing data and the associated metadata for all of the resequencing samples with the CCGP Bioinformatics team.

Please review our [Whole Genome Resequencing Data Ingest and Management Plan](#) for more information on how to share this material.

If you have any questions about this data sharing process, please contact our Data Wrangler, [Cade Mirchandani](#).

Projects that already have samples in hand should be working to generate and submit sequencing data regardless of whether they have completed sample sets. Projects planning on utilizing the [CCGP Mini-Core](#) can submit sample sets of roughly half or more of their planned samples. We encourage submission of partial sequencing data sets to help move the project forward.

Thank you, as always, for your participation and collaboration. Please don't hesitate to reach out with any questions.

-The CCGP Team
